Potentially Shocking!

Take a good look at this receptacle. Besides ten layers of paint, what you'll see is a damaged outlet with some exposed wires. Most adults are smart enough to keep their fingers away from something like this, but children are a different story ... and this room is often filled with 'em. All it takes is one curious kid to stick a little finger in the crack and touch some contacts ... scary

Fortunately, a sharp-eyed worker found it before anyone got hurt. Folks, if there's one lesson to take away from this photo it's that we're all responsible for the safety of ourselves and others. If you see something that is unsafe, bring it to the attention of those who can fix it. You just might save a life.

Thanks to a petty officer at NAS Oceana for this one.

Many people are unaware of the **deadly** potential of 110 volts. Please take these sorts of things seriously!
